Prepared by Daniel Dueñas | Research & Intelligence Operations

Public-Source Verification & Reconciliation

Methodology demonstration | U.S. industrial, manufacturing, and distribution events | Prepared September 2026

Coverage: ten U.S. industrial events announced or completed 2025–2026, verified against primary and secondary public sources, with original-source comparisons back to 2021 where reconciliation required them. Every material statement is classified as documented fact, derived calculation, inference, or unknown. Sources marked in the source list as verified at search-result level only support no load-bearing claim. No discrepancies were manufactured: where a record is clean, it is recorded as clean.

Executive Summary

This demonstration tests a different discipline from account mapping: given events already reported in public sources, can a research process verify them, reconcile conflicts between sources, and produce a final record a reader can trust without re-doing the work? Ten events were selected from 2025–2026 U.S. industrial, manufacturing, and distribution news, with at least three known in advance to carry meaningful verification issues. Each was traced to the top of its source hierarchy — company newsrooms, investor relations, municipal and state records — and compared against secondary coverage. Three findings stand out. First, four-figure headlines routinely collapse multiple distinct claims with different origins: Darigold's Pasco plant carries at least three different public investment totals from different sources and eras, all faithfully preserved here. Second, announced and completed are different states of the world: Dollar Tree's Litchfield Park distribution center was announced in October 2025 with a spring 2026 opening and confirmed open in May 2026 reporting — with an unreconciled square-footage difference between the two records. Third, secondary alignment is usually repetition, not corroboration: nearly identical trade coverage of Church Brothers, Chobani, and Cargill traces to the same originating releases. Six events verified with qualifications, one with conflicting evidence, and three recorded as clean. No public document was bypassed, and no 'not found' was converted into 'does not exist.'

Verification Ledger

#	Company / Event	Event type	Verification status	Conf.
1	Darigold — Pasco, WA dairy plant	New plant begins processing	Verified with qualification	HIGH
2	Chobani — Twin Falls, ID plant expansion	$500M expansion announced	Verified with qualification	HIGH
3	Church Brothers Farms — Mann Packing assets	Acquisition announced, then closed	Verified (clean)	HIGH
4	JBS USA — Greeley, CO beef plant	$50M expansion announced	Verified with qualification	HIGH
5	Nestlé USA — Glendale, AZ factory	Announced 2022; opened 2025	Verified with qualification	HIGH
6	Dollar Tree — Litchfield Park, AZ DC	Announced 2025; opened 2026	Verified with qualification	HIGH
7	XNRGY — Mesa, AZ manufacturing	Mesa 1 grand opening	Verified with qualification	HIGH
8	Growers Ice Co. — Salinas, CA campus	$250M redevelopment reported	Conflicting evidence	MEDIUM
9	Cargill — Fort Morgan, CO beef plant	~$90M automation investment	Verified (clean)	HIGH
10	La-Z-Boy — Glendale, AZ DC	New DC opened	Verified (clean)	HIGH

Confidence reflects sourcing strength (primary versus secondary, single versus multiple), not the likelihood that an event occurred.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.

Case Dossiers

1. Darigold — Pasco, WA dairy plant — Verified with qualification — Confidence: HIGH

Event: New butter and milk-powder plant begins processing milk; project first announced July 2021, operational June 2025.

Sources: Port of Pasco release, Jul 1, 2021 [V01]; Darigold Media Room, Jun 4, 2025 [V02]; The Spokesman-Review, Jun 4, 2025 [V03]; Feedstuffs (company release), Jun 9, 2025 [V04]; The Bulletin (Bend, OR), Jul 1, 2021 [V22].

Key claims and source of origin: The more-than-$1 billion figure (including on-farm expansion) originates with Darigold [V04]. The ~$900 million completed-cost figure originates with regional press [V03]. 2021 reporting itself split: The Bulletin's July 1, 2021 report described a $450 million plant and quoted Darigold officials predicting capital investment between $450 million and $500 million [V22], while the Port of Pasco's same-day release described approximately $500 million [V01]. Trade coverage largely repeats the company release and is not independent corroboration.

Discrepancies and ambiguities: Investment figures differ across sources and eras (approximately $450–500 million in 2021 announcements; a reported ~$900 million completed cost in 2025; more than $1 billion including on-farm improvements per the company); facility size differs (~400,000 sq ft in 2021 reporting; 500,000 sq ft in 2025 regional reporting); the Port's 2021 release stated a fall 2023 online target, while first milk was processed June 2025. These differences appear to reflect scope, staging, and restatement; they are not reconciled in the public sources reviewed and are preserved as differences in reported figures.

Final verified formulation: Darigold's Pasco plant — first announced in 2021 with a land purchase at the Port of Pasco's Reimann Industrial Center — began processing milk in early June 2025, with phased start-up continuing through 2025. Public sources report different investment totals for the project at different stages; all reviewed figures are recorded without selection.

Why verification changed the record: A headline reading — '$900M plant opens' — collapses four distinct figures with different scopes and origins; the verified record preserves all of them with attribution and adds the 2021-to-2025 schedule difference.

Remaining unknowns: Whether the second dryer and butter production reached year-end 2025 milestones; the company's final internal project cost.

2. Chobani — Twin Falls, ID plant expansion — Verified with qualification — Confidence: HIGH

Event: $500 million expansion of the Twin Falls plant announced March 2025; expected operational early 2026.

Sources: City of Twin Falls civic announcement, Mar 20, 2025 [V05]; Food Processing, Mar 21, 2025 [V06]; FoodBev, Mar 26, 2025 [V07].

Key claims and source of origin: $500 million; production increase of 50%; more than 500,000 sq ft added, bringing the plant to 1.6 million sq ft with 24 production lines; 1,200+ employees; minimum 160 new jobs — all originate with the Chobani / City announcement; trade coverage repeats them without independent verification.

Discrepancies and ambiguities: None material on figures. Two secondary-quality observations: FoodBev's page displays a February 2025 metadata date while its article is dated March 26, 2025 — page metadata proved unreliable; and FoodBev transcribes the 'largest natural food production facility' claim with 'county' where the municipal source says 'country,' a small transcription difference in claim propagation. FoodBev also reports cumulative regional investment since 2012 (over $1.3 billion) alongside the project figure — different scopes, correctly distinguished by the source.

Final verified formulation: Announced March 2025, reported under construction by late March 2025, expected operational early 2026; operational status is not established by the sources reviewed.

Why verification changed the record: Distinguishes announced construction from expected operations from verified operations.

Remaining unknowns: Completion status; equipment and contractor decisions.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
daniel@danielduenas.co

3. Church Brothers Farms — Mann Packing assets — Verified (clean) — Confidence: HIGH

Event: Acquisition of key Mann Packing assets and operations from Fresh Del Monte; announced October 21, 2025; completion announced December 16, 2025.

Sources: Fresh Del Monte investor-relations release, Oct 21, 2025 [V08]; Church Brothers release via the Salinas Chamber of Commerce, Dec 16, 2025 [V09].

Key claims and source of origin: The acquired facility is a 200,000 sq ft fresh-cut plant (160,000 sq ft production and cold storage; 40,000 sq ft offices; 7.5 acres reserved for future expansion); all retail processing consolidates to Gonzales, freeing the San Juan Bautista, Yuma, and Northern Mexico facilities for foodservice growth [V09]. The October release stated Church Brothers 'will assume operations' (future tense); the December release confirms closing.

Discrepancies and ambiguities: None located. Transaction value: not disclosed in the public sources reviewed — recorded as unknown, not as zero. The two counterparty releases are mutually consistent — stronger than syndicated repetition, though both originate with the transacting parties.

Final verified formulation: Announced October 21, 2025; completion announced December 16, 2025; terms not publicly disclosed.

Why verification changed the record: Separates the October agreement announcement from the December completion.

Remaining unknowns: Purchase price; integration timeline.

4. JBS USA — Greeley, CO beef plant — Verified with qualification — Confidence: HIGH

Event: $50 million investment at the Greeley beef plant including a new distribution center; announced February 4, 2025, with construction to begin in 2025.

Sources: JBS Foods Group release, Feb 4, 2025 [V10]; CBS Colorado, Feb 4, 2025 [V11].

Key claims and source of origin: A $200 million two-plant program (Cactus, TX and Greeley, CO), of which Greeley is $50 million; the Greeley facility employs more than 3,800 team members [V10]. The $200 million figure originates with the company release; local coverage correctly isolates the $50 million Greeley share.

Discrepancies and ambiguities: None on figures; the ambiguity is scope — '$200 million' headlines describe a two-site program, of which Greeley is $50 million. The release states the projects provide the potential for increased production capacity in the future — potential, not completed capacity.

Final verified formulation: Announced February 4, 2025; construction to begin in 2025; completion status not established in the sources reviewed.

Why verification changed the record: Prevents attributing the full $200 million to Greeley and separates announced from completed construction.

Remaining unknowns: Construction status; equipment scope.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
daniel@danielduenas.co

5. Nestlé USA — Glendale, AZ factory — Verified with qualification — Confidence: HIGH

Event: New 630,000 sq ft beverage factory and distribution center; announced March 9, 2022; opened January 28, 2025.

Sources: Arizona Commerce Authority (state government), Mar 9, 2022 [V12]; Nestlé USA newsroom, Jan 28, 2025 [V13]; plus Phoenix Business Journal coverage identified at search-result level [V23].

Key claims and source of origin: Over $675 million investment (consistent across the 2022 announcement and 2025 opening); 630,000 sq ft; more than 350 projected jobs in 2022 versus approximately 300 jobs stated at the 2025 opening.

Discrepancies and ambiguities: Sources report different jobs figures — preserved, not reconciled. The 2022 announcement stated a 2024 operational target; the factory opened January 2025.

Final verified formulation: Announced March 2022 at $675 million with more than 350 projected jobs and a 2024 target; opened January 2025 with 300 jobs stated; investment and size figures align; the jobs figure and timing differ between records.

Why verification changed the record: A single-source summary would carry the 350-job figure forward; the reconciled record shows 300 at opening and the moved date.

Remaining unknowns: Current employment; reasons for the figure differences (not established in the sources reviewed).

6. Dollar Tree — Litchfield Park, AZ distribution center — Verified with qualification — Confidence: HIGH

Event: Purchase and opening of a distribution center outside Phoenix; announced October 3, 2025; opening reported May 14, 2026.

Sources: Dollar Tree corporate release, Oct 3, 2025 [V14]; Supermarket News, May 14, 2026 [V15]; plus the company's opening release, identified at search-result level via the newsroom listing [V24].

Key claims and source of origin: At announcement: a 1.25 million sq ft turnkey purchase, anticipated to open spring 2026, about 400 jobs, serving stores in Arizona, Colorado, Nevada, New Mexico and Utah [V14]. At opening: ribbon cut, deliveries to begin the following month, service to about 700 stores across five Western states, nearly 400 jobs, and a reported 1 million sq ft facility [V15].

Discrepancies and ambiguities: Facility size is reported differently — 1.25 million sq ft at announcement versus 1 million sq ft at opening; the sources do not reconcile the difference, and it is preserved.

Final verified formulation: Announced October 3, 2025 as a purchase with anticipated spring 2026 opening; opening confirmed in May 2026 reporting, with about 400 jobs and roughly 700 stores served across five Western states; public sources report different square-footage figures for the facility.

Why verification changed the record: Converts a planned event into a completed one while surfacing a new, unreconciled size difference between the two records.

Remaining unknowns: The cause of the size difference; the precise first-delivery date.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
daniel@danielduenas.co

7. XNRGY Climate Systems — Mesa, AZ manufacturing — Verified with qualification — Confidence: HIGH

Event: Grand opening of the Mesa 1 manufacturing facility; ribbon-cutting October 23, 2025; company release October 27, 2025.

Sources: XNRGY release, Oct 27, 2025 [V16]; AZ Big Media, Nov 2, 2025 [V17].

Key claims and source of origin: Mesa 1 is expected to create 900 jobs when fully expanded; a second facility, Mesa 2 (330,000 sq ft, announced September 17, 2025), is expected to add 500 jobs; the company describes these as its fourth significant growth initiative in three years [V16]. All figures originate with the company.

Discrepancies and ambiguities: The secondary headline — 'expects to bring 500 more jobs' — reflects the Mesa 2 projection, while its body accurately reports 900 for Mesa 1: a headline-framing difference, not a factual conflict. Job projections and the growth-initiative count are company statements, not independently corroborated in the sources reviewed.

Final verified formulation: Mesa 1 opened with a ribbon-cutting October 23, 2025, with a projected 900 jobs at full expansion; a second, 330,000 sq ft facility announced September 17, 2025 is projected to add 500 jobs.

Why verification changed the record: Disambiguates which jobs figure attaches to which facility.

Remaining unknowns: Mesa 2 construction status; realized job counts.

8. Growers Ice Co. — Salinas, CA campus — Conflicting evidence — Confidence: MEDIUM

Event: Redevelopment of the 28-acre Salinas cold-storage campus into a 400,000 sq ft facility; reported on track for completion in early 2026.

Sources: Produce Processing, January 2026, reporting an on-record CEO interview [V18]; Monterey County Weekly local reporting from the planning phase [V19].

Key claims and source of origin: A $250 million redevelopment (2026 trade report, CEO-sourced); a $168 million redevelopment plan (earlier local report, from the same planning materials); a prior 200,000 sq ft facility processing 2,000+ tons of produce per day and 30 million+ cartons annually; tenants including Central Coast Cooling [V18]. The entire current public record traces to one interview chain plus earlier planning-stage reporting; no independent corroboration was located.

Discrepancies and ambiguities: Public sources report different total investment figures ($168 million planning phase; $250 million in 2026) for what appears to be the same campus, with no public reconciliation; ownership naming differs across eras (Post Harvest Technologies in the earlier report; Growers Ice Co. in the 2026 report, following a described 2023 combination of affiliated companies). The completion claim is a projection from January 2026 reporting.

Final verified formulation: A major redevelopment of the Salinas cold-storage campus is documented in public reporting, targeting roughly 400,000 sq ft with reported completion expected in early 2026; public sources report different investment totals at different project stages, which remain unreconciled, and all current figures trace to a single interview chain.

Why verification changed the record: A single-source reading would report '$250 million redevelopment' as established fact; the reconciled record shows one company-sourced value in a chain that earlier reported $168 million, with no independent confirmation of either.

Remaining unknowns: Completed investment; completion status; entity-to-entity scope relationships.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
daniel@danielduenas.co

9. Cargill — Fort Morgan, CO beef plant — Verified (clean) — Confidence: HIGH

Event: Investment of nearly $90 million in automation and new technologies at the Fort Morgan beef plant; announced June 5, 2025; phased over several years.

Sources: Cargill release, Jun 5, 2025 [V20]; FoodBev trade coverage, Mar 2, 2026 (search-result level) [V25].

Key claims and source of origin: Nearly $90 million under the company's Factory of the Future initiative; approximately $24 million already invested at the site since 2021; enhancements implemented over several years. All figures originate with the company release; the later trade item repeats the figure and adds no independent verification.

Discrepancies and ambiguities: None located. The record is clean, with one structural qualification: secondary alignment is repetition of the primary, not independent confirmation.

Final verified formulation: Announced June 5, 2025: a nearly $90 million multi-year automation and technology investment at the Fort Morgan plant.

Why verification changed the record: The record stays clean; source-of-origin analysis prevents overstating corroboration.

Remaining unknowns: Implementation progress; scope boundaries.

10. La-Z-Boy — Glendale, AZ distribution center — Verified (clean) — Confidence: HIGH

Event: Opening of a new Glendale distribution center, announced by the municipality November 5, 2025.

Sources: City of Glendale announcement, Nov 5, 2025 [V21].

Key claims and source of origin: Approximately 225,000 sq ft; approximately 30 team members; the company's second Glendale facility; part of a multi-year distribution-network transformation serving the Valley and the greater Southwest. All claims originate with the municipal announcement.

Discrepancies and ambiguities: None located. No independent secondary confirmation was located — recorded as an information gap, not doubt about the event.

Final verified formulation: The City of Glendale announced on November 5, 2025 the opening of the approximately 225,000 sq ft Glendale distribution center, the company's second Glendale facility.

Why verification changed the record: The record is clean; its value is demonstrating that a municipal source can anchor a verified event without corporate or trade corroboration.

Remaining unknowns: Equipment configuration; other planned Western network nodes.

Three Cases Where Verification Changed the Record

Dollar Tree (announced vs. completed). The October 2025 announcement described a purchase with an anticipated spring 2026 opening; May 2026 reporting confirms the ribbon-cutting and store count, but reports a different facility size than the announcement. The final record converts a planned event into a completed one while preserving the unreconciled size difference rather than silently adopting either figure.

Darigold (four investment figures, four origins). $450 million (2021 regional report, which also quoted officials predicting $450–500 million), approximately $500 million (Port of Pasco 2021 release), a reported ~$900 million completed cost (2025 regional press), and more than $1 billion including on-farm investment (company, 2025). None is wrong on its own terms; each measures something different. The verified record preserves all four with attribution instead of selecting one.

Nestlé (projection vs. opening). The 2022 announcement projected more than 350 jobs and a 2024 opening; the January 2025 opening record states approximately 300 jobs. The reconciled record carries both figures and dates forward, with the difference explicitly marked as unexplained by the sources.

Records That Verified Clean

Church Brothers Farms. The October 2025 agreement announcement and December 2025 completion announcement are mutually consistent counterparty releases; no discrepancy was located. Terms were not disclosed and are recorded as unknown, not as zero.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
daniel@danielduenas.co

Cargill. The June 2025 announcement is internally consistent, with later trade coverage that repeats — and therefore does not independently corroborate — the company's figures. Recorded as clean, with that structural qualification stated.

La-Z-Boy. A single municipal source with no located secondary confirmation; the gap is noted without treating absence of coverage as absence of the event.

Methodology

Source hierarchy. For each event, sources were sought in descending order of authority: company newsroom or investor-relations releases; government records (municipal, county, port, state commerce authorities); corporate-distributed releases on wires; then credible trade and regional business press. Higher-tier sources were retrieved and read directly wherever available.

Claim tracing. Every load-bearing number (investment, square footage, jobs, dates) was traced to the earliest public source located, and the origin was recorded. Where multiple sources repeated a claim, repetition was not counted as corroboration unless the reporting was demonstrably independent of the originating release.

Reconciliation. Discrepancies were classified as scope differences, restatements, transmission errors, or unresolved conflicts. Scope differences and restatements were preserved with attribution; transmission errors were noted as such; unresolved conflicts were recorded as conflicting evidence rather than resolved by choosing a preferred figure.

Exception handling. Records that could not be fully verified were downgraded or flagged, never padded: sources identified only through search results were marked as such and excluded from load-bearing claims; 'not disclosed' was never converted to a figure; 'planned' was never converted to 'completed.'

Source-recency discipline. Primary sources were re-checked against their own earlier versions where the event had a multi-year arc (2021 announcement to 2025 completion), so that the record reflects what each source said when it said it, not a retrospective merged version.

Coverage and Limits

– This is a research-discipline demonstration, not legal or investment advice; no organization mentioned commissioned, reviewed, or endorsed it.

– Verification is bounded by what is publicly accessible; private contracts, permits filed but not published, and paywalled trade databases were not used or bypassed.

– Sources verified only at search-result level (V23, V24, V25) are marked in the source list; none supports a load-bearing claim.

– Absence of secondary coverage was not treated as evidence that an event did not occur, and repetition of a press release was not treated as independent corroboration.

– Where public sources conflict and no reconciliation is available, the conflict is preserved; the record does not adjudicate which figure is correct.

– Corporate releases verify what was said, not what was done; completion claims rest on the sources cited at each stage, and several multi-year projects carry unverified completion status.

– Some page-level metadata (for example, article dates displayed by content platforms) proved unreliable; dates were taken from the article text where the two disagreed.

Independent research sample prepared from publicly available sources. Daniel Dueñas is not affiliated with or endorsed by the companies or organizations mentioned. Company names and trademarks belong to their respective owners.
